

**one of my
eyes is a
prosthesis...
...can you
guess which?**

LaDonna Swan, Certified Ocularist,
B.C.O., F.A.S.O.

Not only do I wear a prosthesis, but for more than 25 years I have specialized in custom-made ocular plastic prostheses for ophthalmic patients experiencing enucleation, evisceration, anophthalmic, microphthalmic, or traumatic sockets.

We are fully equipped to design and create prostheses to match your patient's complete physiological, psychological, and cosmetic needs. Ocular Restoration Clinic specializes in: lid and ocular anatomic deformities, fibrotic sockets, contracted sockets, upper cul-de-sac correction, ptosis of upper lid, flush fitting scleral shell over the human eye, cosmetic corneal contact lens, and pre/post-op conformers.

Ocular Restoration Clinic is an ophthalmologist-ocularist consultation clinic with three board certified ocularists on staff. We are members of the American Society of Ocularists offering complete patient care programs plus a comprehensive and continual prosthetic program. By your invitation, Ocular Restoration Clinic can demonstrate to you with a lecture/slide presentation the phenomenal success we have had for other doctors' patients.

We care, care enough to want your patient's life as full as mine has been since I created the prosthetic procedure for my left eye.
